

HAITI

COOL DOWN THE PLANET – HEAT UP YOUR ECONOMY Energy efficiency improvement for cooling appliances

NATIONAL ANNUAL SAVINGS ACHIEVABLE WITH AN IMPROVED POLICY FRAMEWORK					
ààà	Save electric energy worth 105 million US\$				
C02	Reduce CO ₂ emissions by 445 thousand tonnes				
	Reduce electricity use → by over 599 GWh				
	equivalent to 250,000 passenger cars $\stackrel{}{\leftrightarrow} \stackrel{}{\leftrightarrow} \stackrel{}{\to} \r{$				
2 SHARES IN SAVINGS FROM EACH PRODUCT					
Domestic Refrigerators	4% Room air Conditioners 73% Ceiling Fans				

THE PATHWAY TO ENERGY EFFICIENCY

Country Specific Data and Input Assumptions for Haiti

efficient appliances & equipment

Global Partnership Programme

GENERAL INFORMATION

Population	10.17 million
GDP per capita	776 US\$
Electrification level	20 %

ELECTRICITY MARKET

Electricity tariff	0.176 US\$ / kWh
CO ₂ Emission Factor	0.63 kg / kWh
Transmission and	16 %
distribution loss factor	

BASELINE OF CURRENT PRODUCTS

Product	Price (USD)	Unit Energy Consumption (kWh / year)	Appliance Lifetime (years)	Type of Product
⊗¹ Air conditioners	650	2,556	12	Window / wall air conditioner with 3.5 kW (12,000 Btu / hour or 1 ton) cooling capacity
😾 Fans	100	88	10	Ceiling fan
🔁 Refrigerators	600	485	15	2-door top-mount 300-liter refrigerator-freezer

METHODOLOGY

The analysis uses CLASP's Policy Analysis Modeling System (PAMS) to forecast the impacts from implementing policies that improve the energy efficiency of new household air conditioners, refrigerators, and ceiling fans. It is assumed policies are implemented in 2020 and saving potentials are from 2030. The potential savings are based on a best-available technology scenario, including all expenditures associated with purchase and use of the product.

ASSUMPTIONS AND DATA SOURCES

- **Population and GDP per capita data** (2012) comes from the World Bank.
- Electrification level was provided by country representatives (when available) and the International Energy Agency (IEA).
- Market size was determined by data provided by country representatives (when available); industry partners; International Copper Association (ICA); UN Comtrade database; Inter-American Development Bank; household penetration forecasts generated by PAMS from population, climate, and macroeconomic indicators.
- Baseline price, unit energy consumption (UEC), appliance lifetime were provided by country representatives (when available); industry partners; ICA; and Lawrence Berkeley National Laboratory. The business-as-usual scenario assumes a 1 per cent annual improvement in UEC.
- **Electricity tariff** was provided by country representatives (when available); IEA; and internet research.
- Transmission and distribution loss factor is a regional average calculated from electricity production and consumption data published by the International Energy Agency (IEA).
- **CO2 Emission Factor** was provided by UNEP and extrapolations were made by CLASP for seven small island nations.
- **Consumer discount rate** was derived from the Human Development Index, United Nations Development Programme (2012). The rate varies by country from 7% to 13%, with less developed countries having higher rates.
