

NAP Caribbean Workshop, 31 May– 2 June 2017

### The Challenge

- There is no international process for presenting information about climate impacts consistently at the national level
  - assessments use many different approaches, timescales, descriptions of sectors, etc.
  - some lack transparency in respect of assumptions and methods
  - synthesis at the country level is challenging
  - comparison of assessment results difficult
  - international cooperation on cross-border impacts difficult to assess

Americas, Caribbean and South Pacific	Europe and West Asia	Africa and Middle East	Asia and Australia
Brazil Costa Rica Fiji Mexico Peru USA	France Germany Italy Poland Russia Spain Turkey UK	Egypt Ethiopia Ghana Kenya Saudi Arabia South Africa Tanzania	Australia Bangladesh China India Indonesia Japan Nepal Philippines Republic of Korea Vietnam

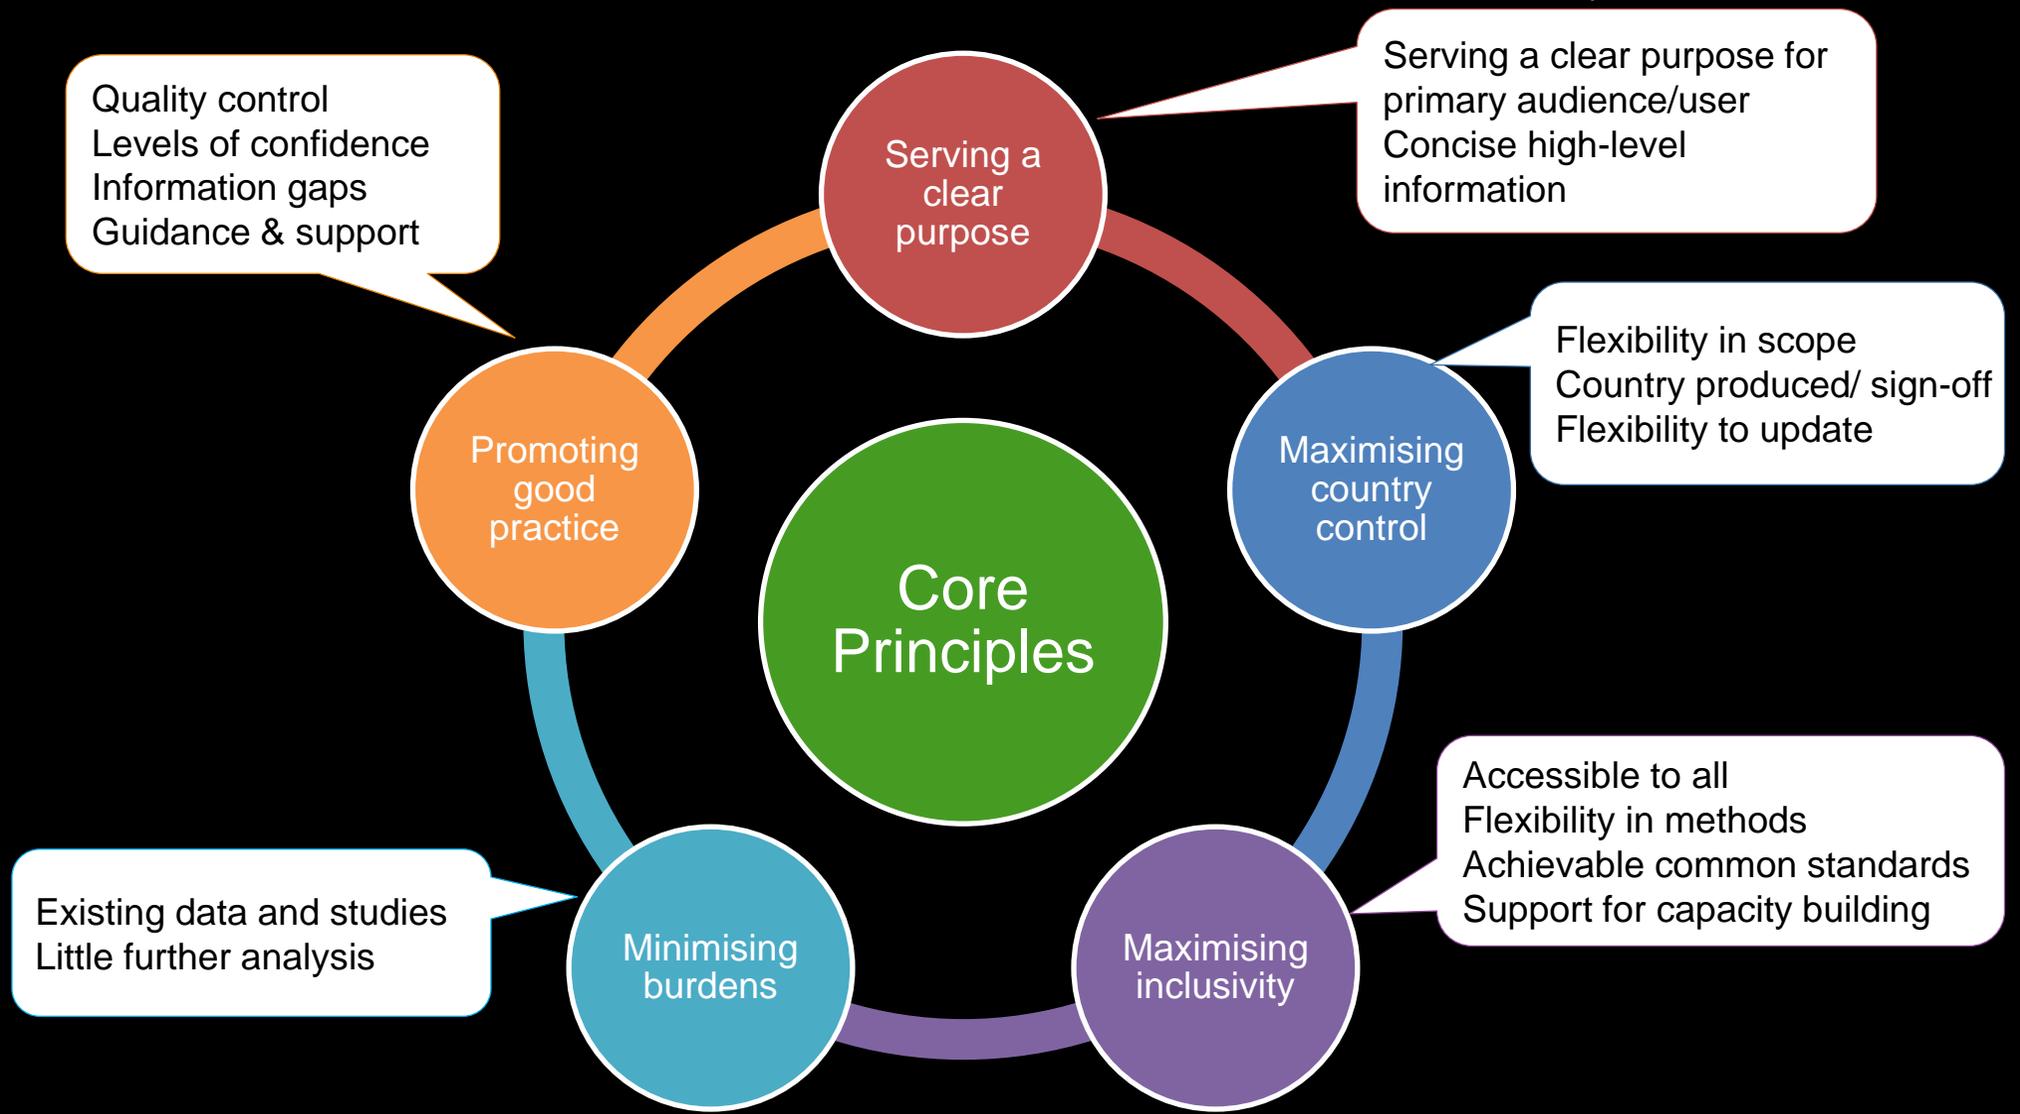

## The Potential Benefits from greater consistency and transparency include:

- More effective information exchange, greater shared understanding
- Enhanced collaborative research and action (mitigation and adaptation)
- Best practice, collective learning, capacity building
- Better informed country-level engagement in international climate policy processes

## Aims of the initiative

- To facilitate global understanding of country-level climate impacts to support action on climate change, by informing national mitigation and adaptation planning, and international dialogue
- To promote good practice and collective learning in assessing climate impacts

# CLICC: Core Principles

- Based on Dashboard concept
- Reviewed by Pilot countries
- Accompanied by template table
- Core sectors
- Several information layers
- Focus on rating of impacts (H, M, L)
- Focus on traceability and assumptions (metadata)

## Table of contents

<b>1</b>	<b>Background.....</b>	<b>1</b>
1.1	CLICC Project State of Play .....	1
1.2	Purpose of the CLICC Pilots .....	1
1.3	Purpose of this document.....	2
<b>2</b>	<b>Proposed Pilot Outputs .....</b>	<b>3</b>
2.1	Pilot Template.....	3
2.2	CLICC Information Layers.....	4
<b>3</b>	<b>Definition of common sectors.....</b>	<b>5</b>
3.1	Proposed set of common sectors.....	5
3.2	Common sectors: alternative options.....	6
<b>4</b>	<b>Common ratings for impacts .....</b>	<b>7</b>
4.1	Vulnerability .....	7
4.2	Observed impacts .....	8
4.3	Projected impacts.....	10
<b>5</b>	<b>Common ratings for confidence and data quality .....</b>	<b>11</b>
5.1.1	Confidence .....	11
5.1.2	Data quality .....	11
<b>6</b>	<b>Common presentation of metadata .....</b>	<b>13</b>

### Appendices

Appendix 1: Impact categories used in IPCC AR5

Appendix 2: UN standard statistical classifications

Appendix 3: Core impact categories selected by countries' votes at the CLICC workshop, May 2015

## COUNTRY RESEARCH / DATA

# CLICC TEMPLATES

## IMPACT RATINGS

Observed climate impacts						
Sector	Observed climate impacts	Global impact rating (High / Medium / Low) <i>(Please see Technical Guidelines Section 4.2 for rating method)</i>	National impact rating (High / Medium / Low) <i>(Please see Technical Guidelines Section 4.2 for rating method)</i>	Confidence rating (Very low / Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.2 for rating method)</i>	Data quality rating (Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.2 for rating method)</i>	Time period  Metadata <i>(Please see Annex 2 below and Technical Guidelines Section 6 for further details)</i>
<i>(In order to embrace variation and uncertainties, ratings can include a range, e.g. Low-Medium, Medium-High, or Low-High)</i>						
<b>EXAMPLE</b> Food security and food production systems	- Greater variability in crop yields due to higher temperatures and greater variability in rainfall.	Medium	High	Low-Medium	Medium	1961-1991 1.1

Projected climate impacts						
Sector	Projected climate impacts	Impact rating (High / Medium / Low) <i>(Please see Technical Guidelines Section 4.3 for rating method)</i>	Confidence rating (Very low / Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.1 for rating method)</i>	Data quality rating (Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.2 for rating method)</i>	Time period	Metadata <i>(Please see Annex 2 below and Technical Guidelines Section 6 for further details)</i>
<i>(In order to embrace variation and uncertainties, ratings can include a range, e.g. Low-Medium, Medium-High, or Low-High)</i>						
<b>EXAMPLE</b> Food security and food production systems	- It is uncertain how climate change will affect yields of crops <sup>1</sup> . - Some models suggest a north-south divide with increased yields (especially of wheat) in the north and decreases in the south <sup>2</sup> .	Low	Very Low	Medium	2040-2069	2.1 - 2.2

## META DATA & DATA QUALITY ASSESSMENT

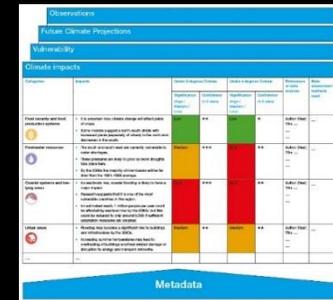

Metadata	
<b>Metadata identifier</b>	2.1-2.2
<b>Explanation for impact rating</b> <i>(Explanation of the impact rating given and how it relates to the specific information in question)</i>	<b>EXAMPLE Low</b> – Low vulnerability and low climate exposure result in a low impact rating.
<b>Explanation for Confidence rating</b> <i>(Explanation of the confidence rating given and how it relates to the specific information in question)</i>	<b>EXAMPLE Very low</b> – only 2 studies available which are of low-quality analysis with little agreement between studies or experts.
<b>Climate projections, emissions scenarios, or models used</b> (if relevant)	
<b>Source(s)</b> (e.g., document, study, reports etc.)	
<b>Datasets</b> (if applicable)	
<b>Additional assumptions</b> (if applicable and not covered by common ratings approach)	
<b>Additional limitations</b> (if applicable and not covered by common ratings approach)	

Data quality assessment		
Dataset: <i>(List the dataset assessed)</i>		
Data Quality Criteria	Levels	Score
<b>1. Transparency and auditability</b>	1. Data unavailable to public 2. Limited summary data available 3. Full raw/primary data set and metadata available	
<b>2. Verification</b>	1. Unverified data 2. Limited verification checks in place 3. Detailed verification in place and documented	
<b>3. Frequency of updates</b>	1. Sporadic 2. Every 3-5 years 3. Annual or biennial	
<b>4. Security</b>	1. Future data collection discontinued 2. Future data collection uncertain 3. Future data collection secure	
<b>5. Spatial coverage</b>	1. Partial national coverage 2. National coverage, some bias 3. Full national coverage, including adjacent marine areas, if and where appropriate	
<b>TOTAL</b>		
<b>RATING</b>		

Total scores should be rated as follows: 5 to 8 (Low); 9 to 12 (Medium); 13 to 15 (High)

SEE THE CLICC LEARNING JOURNEY

## CLICC PROCESS & ENGAGEMENT

# Six phase 1 Pilot countries

## Purpose of the CLICC Pilots

Onward refinement and demonstration of a technical approach for more consistent communication of climate change impacts and risks at the national level. This involved:

- Apply technical approaches
- Provide pilot output products
- Clarify level of resources needed by countries
- Develop and test the concept of CLICC Learning Journey
- Inform the governance needed to support CLICC longer-term

**Pilot Countries (2015/2016):** China, Fiji, Ghana, Russia, UK, and Vietnam.  
In addition, Brazil participated as an observer.

**Russia-UK Bilateral project (2016/16):** applied the CLICC template  
Melting Permafrost (Russia), Flooding (UK)

## What has happened

### Establishing the initiative

- Research and consultation
- Build support

### Transition phase

- Consolidate approaches
- Strengthen relationships

*Technical pilots in 6 countries*

### Adoption by UNEP

- Define functions
- Develop governance

### Onward delivery

- Secure funding
- Implementation

*CLICC products*

## What happens next?

- **Workshops:** Further development of the methodology through (regional) workshops.
- **Second round of pilots:** Further refinement of the technical approach; collect and learn from pilot recommendations and; clarify future resourcing requirements.
- **Coordination and funding:** Engagement with countries and international bodies to shape arrangements for the long-term CLICC programme, aligning it with other international processes.

# Vietnam, Russia and China

# Summary of Phase 1 Pilot from Russian Federation

Sector	Global impact rating	National impact rating	Confidence rating	Data quality rating
<u>Freshwater resources:</u> Increase in river runoff, increase in frequency of floods	Low-High	Low-Medium	Medium-high	High
<u>Human health:</u> Additional morbidity and mortality from heat waves, infectious diseases	Low-High	Low-Medium	Low-High	Low-high
<u>Terrestrial permafrost:</u> <b>Melting of permafrost upper layer, destruction of sea coasts, buildings and infrastructure</b>	<b>High</b>	<b>High</b>	<b>High</b>	Medium

Observed climate impacts on the permafrost zone						
Sector	Observed climate impacts	National impact rating	Confidence rating	Data quality rating	Time period	Metadata identifier(s)*
Coastal systems and low-lying areas	• Intensification of coastal erosion along the Arctic coast	High	Medium	High	1979-2012	1.1
	• Intensification of landslides and thermokarst processes in the permafrost zone	Low	Medium	Medium	1970-2013	1.2
Human settlements, industry, and infrastructure	• Destruction of transport infrastructure in the permafrost zone	High	High	Medium	1970-2010	1.3
	• Destruction of oil and gas pipelines in the permafrost zone	Medium	Medium	--	1990-2010	1.4
	• Destruction of buildings in the permafrost zone	High	Medium	Medium	1970-2000	1.5

**Table 2.2. Projected climate impacts**

Sector	Projected climate impacts	Impact rating	Confidence rating	Data quality rating	Time period	Metadata identifier(s) <i>(Please see Annex 1)</i>
Coastal systems and low-lying areas	<ul style="list-style-type: none"> <li>Intensification of coastal erosion along the Arctic coast</li> </ul>	Low	Low	--	2020-2050	2.1
Human settlements, industry, and infrastructure	<ul style="list-style-type: none"> <li>Destruction of transport infrastructure in the permafrost zone</li> </ul>	High	Low	--	2050	2.2, 2.4
	<ul style="list-style-type: none"> <li>Destruction of buildings in the permafrost zone</li> </ul>	High	Low	--	2045-2055	2.3, 2.4

# Summary of country lessons learned (including benefits) - Russia

Lessons learned topic	Summary
<b>Achievements and benefits</b>	<ul style="list-style-type: none"> <li>• International collaboration within the area of climate impacts and risks from climate change</li> <li>• Understanding of gaps in Russian national assessments of climate impacts in water resources, human health and permafrost sectors</li> <li>• Investigation the methods of assessing and presenting national climate impacts from different countries</li> <li>• Improvement of the collaboration within Russia between different scientific institution, private sector, the Government and press</li> <li>• A good start of the process of making information on climate change more accessible to the public and policy-makers in Russia</li> </ul>
<b>Technical approach</b>	<p><u>Have worked well:</u></p> <ul style="list-style-type: none"> <li>• The form of proposed Pilot template: main table for observed and projected climate impacts, metadata and data quality tables</li> <li>• The guidelines were very useful</li> </ul> <p><u>Not so well:</u></p> <ul style="list-style-type: none"> <li>• Methodologies for rating impacts are not very clear, further work is essential</li> <li>• Subdivision the impacts into “global” and “national” probably is not effective</li> <li>• The quality of projected climate impacts data is very difficult to evaluate</li> <li>• The regional assessment should be made for large countries</li> </ul>
<b>Cross-Pilot QA process</b>	<p>We satisfy with the proposed form and process of quality assessment during CLICC Pilot phase. It was useful to have comments both from CLICC central team and other Pilot country. Quality check helped to understand that:</p> <ul style="list-style-type: none"> <li>• The ratings of the most presented in Russian Pilot climate impacts are still not clear and need to be reviewed</li> <li>• Metadata table should be not very detailed and long, but at the same time not very brief in order to understand what information was used</li> </ul>
<b>Coordination and Governance in your country</b>	<p>The work was carrying out in Institute of Global Climate and Ecology (IGCE, Moscow) on behalf of Federal Service for Hydrometeorology and Environmental Monitoring of Russian Federation. The information presented in the First and the Second Assessment Reports on Climate Change and its consequences in Russian Federation (2018, 2014) was used for developing the Pilot template. The workload was significant, thus certain extension of national project team would be helpful.</p>
<b>Resources</b>	<p>To participate in CLICC in future Russia needs financial support for attending the workshops (Travel, DSA and TE), technical support such as Guidance and e-mail support, and additional human resources depending on future project workload</p>

# Looking forward – Recommendations and next steps for Russian Federation

Next step topic	Summary
<b>Recommendations for a second phase of pilots</b>	<ul style="list-style-type: none"> <li>• To add more sectors in order to improve and refine the technical approach of the project</li> <li>• To involve more countries in order to generate more ideas and compare the level of climate impacts understanding</li> <li>• To work in the area of Metadata and it's level of detail</li> <li>• To develop the methodologies for rating impacts</li> <li>• To add an adaptation level</li> </ul>
<b>Involved in CLICC going forward</b>	<p>Russia would like to take part in a second round of pilots, building on the results received in the first phase.</p> <p>Further debates on potential users of CLICC data are essential. An analysis of their demand on climate impacts' information can help optimize the project in future.</p>

# China's contribution to CLICC (Country Level Impacts of Climate Change)

Jiang Tong, Zhai Jianqing  
National Climate Centre  
China Meteorological Administration

- 

	<b>Impact</b>	<b>Impact rating</b>	<b>Confidence rating</b>	<b>Data quality rating</b>	<b>Timescale</b>
Water Resources	Decline trend	low-medium	low-medium	High	1961-2013
	Decline trend	low-medium	low-medium	Medium	2016-2050

<b>Lessons learned topic</b>	<b>Summary</b>
<b>Achievements and benefits</b>	we learned how to assess climate change impacts between countries and more information from other countries
<b>Technical approach</b>	CLICC template worked better than metadata tables, as data tables can not include different situation of each county
<b>Cross-Pilot QA process</b>	this is good way to cross-pilot process
<b>Coordination and Governance in your country</b>	we have a team working closely.
<b>Resources</b>	Communication is so important to put the principles to practice.

Next step topic	Summary
<b>Recommendations for a second phase of pilots</b>	Hope to shape a new working groups and scientific commission...and more countries can be included.
<b>Involved in CLICC going forward</b>	Yes, We will join a meeting both in Paris and Nairobi.

Sector	Observed climate impacts	Global impact rating	National impact rating	Confidence rating	Data quality rating	Time period	Metadata identifier
<b>Fishery</b>	The impact of climate change on fishing due to storm, tropical low pressure	Medium	Medium	Medium	Medium	2001	<b>1.1</b>
<b>Food security and food production systems</b>	Greater variability in rice crop yields due to storm and flood	Medium	Medium-high	Medium-High	Medium	1986-1990	<b>1.2</b>
	Greater variability in rice crop yields due to drought	High	High	Medium-High	Medium	1986-1990	<b>1.2</b>
<b>Livestock</b>	<b>Greater variability in livestock due to storm and flood</b>	<b>Medium</b>	<b>Medium</b>	<b>Medium</b>	<b>Medium</b>	<b>1986-1990</b>	<b>1.2</b>

## Summary of Phase 1 Pilot from Vietnam

<b>Sector</b>	Projected climate impacts	Impact rating	Confidence rating	Data quality rating	Time period	<b>Metadata identifier</b>
<b>Fishery</b>	Profit from fishery and aquaculture would be reduced due to change of temperature	High	Medium	Medium	2050	<b>2.1</b>
	Profit from fishery and aquaculture would be reduced due to change of precipitation	High	Medium	Medium	2050	<b>2.1</b>
	Profit from fishery and aquaculture would be reduced due to storm	High	Medium	Medium	2050	<b>2.1</b>
<b>Food security and food production systems</b>	<b>Rice yield will be reduced.</b>	<b>High</b>	<b>Medium</b>	<b>Medium</b>	<b>2030; 2050</b>	<b>2.2 – 2.4</b>

Lessons learned topic	Summary
<b>Achievements and benefits</b>	<ul style="list-style-type: none"> <li>- Initial preparation step for the NCA</li> <li>- Capacity building</li> </ul>
<b>Technical approach</b>	<ul style="list-style-type: none"> <li>- The threshold for global impact for economic is clear and easily applied to rate the impact level.</li> <li>- Confidence ratings and Data quality scoring provided in the Guideline have been applied consistently for all metadata among countries</li> <li>- It's still unclear about the threshold of climate change impacts on environment or social impact rating.</li> </ul>
<b>Cross-Pilot QA process</b>	<p>Comments could support each country to revise and make all our information given in the report more transparent and better understanding.</p>
<b>Coordination and Governance in your country</b>	<p>Regular meeting have been organized for senior experts and our colleagues.</p>
<b>Resources</b>	<p>40 man days. 15 pers. and 2 organisations have been consulted</p>

Next step topic	Summary
<b>Recommendations for a second phase of pilots</b>	- Detailed quality assurance (QA) and Metadata transparency should be considered.
<b>Involved in CLICC going forward</b>	<ul style="list-style-type: none"><li>a) Take part in a second round of pilots</li><li>b) Guide or mentor other countries undertaking a pilot</li><li>c) Participate in technical working groups or committees</li><li>d) Help identify and apply for co-funding to support CLICC going forward</li></ul>

# What Countries thought about the Pilots

'We have a better understanding of the gaps in our assessments of sectors'

'We built the capacity of national institutions'

'It was very useful to see how other countries reported on similar issues'

'The template worked very well'

'Reporting national climate impacts was very consistent, but we kept our own flexibility'

'We improved the cooperation between our high level policy makers and our national climate experts'

'I liked the international collaboration and the country-driven approach'

## Observed climate impacts

Sector	Observed climate impacts	Global impact rating (High / Medium / Low) <i>(Please see Technical Guidelines Section 4.2 for rating method)</i>	National impact rating (High / Medium / Low) <i>(Please see Technical Guidelines Section 4.2 for rating method)</i>	Confidence rating (Very low / Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.1 for rating method)</i>	Data quality rating (Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.2 for rating method)</i>	Time period	Metadata identifier(s) <i>(Please see Annex 1 below and Technical Guidelines Section 6 for further details)</i>
<i>(In order to embrace variation and uncertainties, ratings can include a range, e.g. Low-Medium, Medium-High, or Low-High)</i>							
<b>EXAMPLE</b> Food security and food production systems	- Greater variability in crop yields due to higher temperatures and greater variability in rainfall.	Medium	High	Low-Medium	Medium	1961-1991	1.1
	-						

## Projected climate impacts

Sector	Projected climate impacts	Impact rating (High / Medium / Low) <i>(Please see Technical Guidelines Section 4.3 for rating method)</i>	Confidence rating (Very low / Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.1 for rating method)</i>	Data quality rating (Low / Medium / High) <i>(Please see Technical Guidelines Section 5.1.2 for rating method)</i>	Time period	Metadata identifier(s) <i>(Please see Annex 1 below and Technical Guidelines Section 6 for further details)</i>
		<i>(In order to embrace variation and uncertainties, ratings can include a range, e.g. Low-Medium, Medium-High, or Low-High)</i>				
<b>EXAMPLE</b> Food security and food production systems	<ul style="list-style-type: none"> <li>- It is uncertain how climate change will affect yields of crops<sup>2.1</sup>.</li> <li>- Some model suggest a north-south divide with increased yields (especially of wheat) in the north and decreases in the south<sup>2.2</sup>.</li> </ul>	Low	Very Low	Medium	2040-2069	2.1 – 2.2
